# Nevanlinna Theory And Complex Differential Equations

**lectures on nevanlinna theory - purdue university** - lectures on nevanlinna theory alexandre eremenko\* july 20, 2012 value distribution of a rational function  $f$  is controlled by its degree  $d$ , which is the number of preimages of a generic point. **first fundamental theorem of nevanlinna theory** - mat 205b nevanlinna theory the theory aims to describe the value distribution of meromorphic functions by looking at various formulae connecting the values of meromorphic functions with the distribution of its zeros and poles. in the beginning we will derive some of these formulae and later use **introduction to nevanlinna theory - uh** - introduction to nevanlinna theory min ru university of houston minru@math.uh 1/1. introduction: the algebraic case  $i$  the well-known fundamental theorem of algebra states that, for every complex polynomial  $p$ ,  $\deg p = \#(p = 0)$ :  $i$  for any rational function  $f$  on a compact riemann surface  $s$ , **nevanlinna theory and holomorphic mappings between ...** - nevanlinna theory and holomorphic mappings between algebraic varieties 147 (b) can we find a lower bound on the size of  $z_s$ , again in terms of  $z$  and the growth of the mapping? we are able to give a reasonably satisfactory answer to (a) in case  $\text{codim}(z) = 1$  and to **nevanlinna theory - nikolaaksonen** - nevanlinna theory on meromorphic functions and their value distribution theory nikolaaksonen naksonen@ucl october 26th 2010 ... **nevanlinna theory of the askey-wilson divided difference ...** - nevanlinna theory for slow-growing meromorphic functions with respect to the  $aw$ -operator on  $c$  for which the associated picard theorem follows as a special case, just as the classical picard theorem is a simple consequence of the classical nevanlinna theory ([41], see also [42], [27] and [50]). this approach allows us to **difference nevanlinna theories with vanishing and infinite ...** - difference nevanlinna theories with vanishing and infinite periods 3 (2) when a finite-order meromorphic function  $f$  with three picard exceptional values with respect to a varying-steps difference operator of infinite period, then  $f$  is a constant (theorem 5.5). the case (1) above gives an alternative proof of the original little picard theorem. **p-adic nevanlinna theory and applications** - p-adic nevanlinna theory and applications ha huy khoai in this talk we give a brief survey on the p-adic nevanlinna theory and its applications in p-adic function theory and related topics. 1. nevanlinna theory one can start by recalling the fundamental theorem of algebra: theorem 1.1. let  $f(z) = a_0 + a_1 z + \dots + a_n z^n$  **research reports of the nevanlinna theory and its - cajpn** - research reports of the nevanlinna theory and its applications ii (complex dynamics, complex differential equations, p-adic nevanlinna theory) edited by katsuya ishizaki, seiki mori, nobushige toda and kazuya tohge (in alphabetical order) **diophantine approximation and nevanlinna theory** - diophantine approximation and nevanlinna theory paul vojta abstract as was originally observed by c. f. osgood and further developed by the author, there is a formal analogy between nevanlinna theory in complex analysis **11. the principal characters in nevanlinna theory** - 11. the principal characters in nevanlinna theory let  $f$  be a meromorphic function on the whole plane. we define several quantities associated to it. counting function:  $l(r) = \int_0^r n(t) dt$ . if  $0$  is not a pole of  $f$ , then we can simply write  $l(r) = \int_0^r n(t) dt$  either case, it is a quantity we have seen before. suppose  $b_1, \dots, b_n$  are the poles of  $f$  ... **nevanlinna theory for the difference operator** - nevanlinna's theory of value distribution is concerned with the density of points where a meromorphic function takes a certain value in the complex plane. one of the early results in this area is a theorem by picard [11] which states that a non-constant entire function can omit at most one value. nevanlinna proved a **the strength of cartan's version of nevanlinna theory - s u** - the strength of cartan's version of nevanlinna theory 435 theorem 2.1 is a corollary of theorem 7.1 in section 7. we call theorem 7.1 the general form of cartan's theorem, and theorem 2.1 the simple form. in sections 7-9 we discuss and prove theorem 7.1, and we show that the second fundamental theorem is a corollary of theorem 7.1. **recent development in nevanlinna theory and diophantine ...** - recent development in nevanlinna theory and diophantine approximation 5 where we use the important property that  $(f^{(j)})_0 = f_0^{(j)}$  from here and using the logarithmic derivative lemma, we can derive the smt above.
